## DETAILED ACTION

### *Election/Restrictions*

1. Applicant's election with traverse of Group II, claims 7-20, in Paper No. 6 is acknowledged. The traversal is on the ground(s) that claim 21, drawn to a kit, should be combined with the elected invention, as no serious burden upon the Office would exist. This is not found persuasive because the inventions are patentably distinct as the invention of Group I is drawn to products, i.e., device and related kit. The searches are not coextensive, as a search of Group II would not require a search for the device as well as for the probes and for the method. As shown in the prior Office action, the claimed device has a different classification from that of the claimed method and as such, to require a proper search for all inventions would place a burden upon the Office.

The requirement is still deemed proper and is therefore made FINAL.

### *Claim Rejections - 35 USC § 103*

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

Art Unit: 1634

1. Determining the scope and contents of the prior art.
  2. Ascertaining the differences between the prior art and the claims at issue.
  3. Resolving the level of ordinary skill in the pertinent art.
  4. Considering objective evidence present in the application indicating obviousness or nonobviousness.
4. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).
5. Claims 7-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Blackburn et al., in view of Hamershoi et al.
6. Blackburn et al., disclose method for detecting target nucleic acids whereby a labeled probe is used to hybridize to the target nucleic acid. Column 80 discloses that “[a] variety of detection methods may be used, including, but not limited to, ...chemiluminescence [and] electrochemiluminescence...” Column 81 and 82 disclose the use of complexes that comprise osmium, cobalt and ruthenium. Column 82 discloses the application of a potential to the complex such that a measurable signal is produced.
7. While Blackburn et al., disclose that “complexes” of the claimed transition metals are used, it is not explicitly recited that a complex that comprises two such metals is used.
8. Hamershoi et al., teach explicitly of using complexes of ruthenium and cobalt and that such a complex is useful in binding to DNA.

Art Unit: 1634

9. It would have been obvious to one of ordinary skill in the art at the time the invention was made to have combined two transition-metal-ligand complexes as the formation of such a complex is explicitly taught in the prior art. Said ordinary artisan would have had a reasonable expectation of success as the state of the art had been reduced to being well developed and predictable.
